

**Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings of claims in the application:

**Listing of Claims:**

1. (Currently Amended) A multilayer luminal braided self-expanding stent for an anatomical conduit, expendable from a reduced diameter to a nominal diameter, comprising an outer braided peripheral stent structure wherein

said outer peripheral stent structure is permanently linked to a central hollow braided core acting as an inner braided hemodynamic flow deflector by at least a pair of filaments;

said outer peripheral stent structure, said central hollow braided core and said at least a pair of filaments make part of a commonly braided structure, a gap of between 10 to 90% of the nominal diameter of the outer stent extending between the inner and outer parts of the commonly braided structure wherein said parts of the commonly braided structure are permanently linked and extend parallel to each other along their respective full length.

2. (Currently Amended) A multilayer stent according to claim 1 wherein the outer braided peripheral stent structure comprises a first and a second layer which are connected by at least a pair of filaments in order to connect the first two layers to the deflector, the latter comprising last two layers wherein said outer braided peripheral stent structure at least a pair of filaments are permanently linked along its full length to a central hollow braided core, said structure deflecting hemodynamic flow by said at least a pair of filaments.
